

WEARABLE *Wedding*

THE WEDDING FAVOR THAT REMEMBERS THE NIGHT

One band per guest. One *tap* to your whole wedding.

An engraved bead bracelet every guest taps to share their photos – gathered into one album you keep forever. No app, nothing to download.

A KEEPSAKE THAT KEEPS THE MEMORIES

Every guest holds a piece of your day — and every photo finds its *way home.*

Wearable Wedding turns the favor on every place setting into the way your whole celebration shares its photos. Each guest wears a hand-finished bead bracelet engraved with their name. One tap of that band opens their own album — and every candid they capture gathers into a single gallery the two of you keep for good.

No app to download. No hashtag to chase. No camera roll left unshared. Just the night exactly as your guests lived it: the dance floor at midnight, the table you never made it to, the quiet moments between the toasts — the photographs you'd otherwise never see.

WHAT IT IS

An engraved bracelet, and a photo album that fills itself.

Wearable Wedding is a keepsake bead bracelet with a tap-to-share chip sealed inside — *a wedding favour that doubles as your guest photo-sharing album, with no app and nothing for anyone to download.*

NFC TAP

PRINTED CODE BACKUP

WORKS IN ANY PHONE BROWSER

01 — THE BAND

Real, wearable materials

Strung with genuine wood, stone and porcelain beads in wedding tones, finished with an engraved wood tag. A keepsake that outlives the flowers — not a paper wristband binned at midnight.

02 — THE TAP

One tap opens an album

A sealed chip — with a printed code as a fallback — opens each guest's own album in their phone browser, greeting them by name. No app, no sign-up.

03 — THE ALBUM

One gallery you keep

Every guest's photos and comments gather into one shared album — download it all, or order a printed wedding book. Yours forever.

04 — THE SCREEN

Live on the big screen

Reception Mode turns any TV or projector into a live photo wall as guests tap to share, with guest-book wishes in between.

REAL ENGRAVED BANDS • NAMES &
DATE ON THE TAG

Three steps. Nothing for your guests to download.

01

Design & engrave

Design the bands in the 3D studio – choose the beads, the wood tag and the finish. We engrave your names and date on the front, every guest's own name on the back, and seal a tap-to-share chip inside.

02

Guests tap to share

A guest taps their band and their album opens, already greeting them by name. They add the photos they took in seconds – and choose, photo by photo, who gets to see each one.

03

Keep every photo

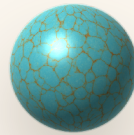

Every guest's photos gather into one shared album. Like, comment and relive the whole night together – then download it all, or order a printed book, in a single click.

REAL BEADS, REALLY YOURS

A keepsake you'll actually keep.

Turquoise

Amethyst

Dragon's Blood

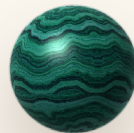

Amber Flame

Porcelain

Volcanic Lava

Malachite

+ DOZENS
MORE

Wood, stone, ceramic and acrylic beads in 8 mm, 10 mm and 12 mm – custom-engraved on the front with your names, date and artwork, and every guest's own name on the back.

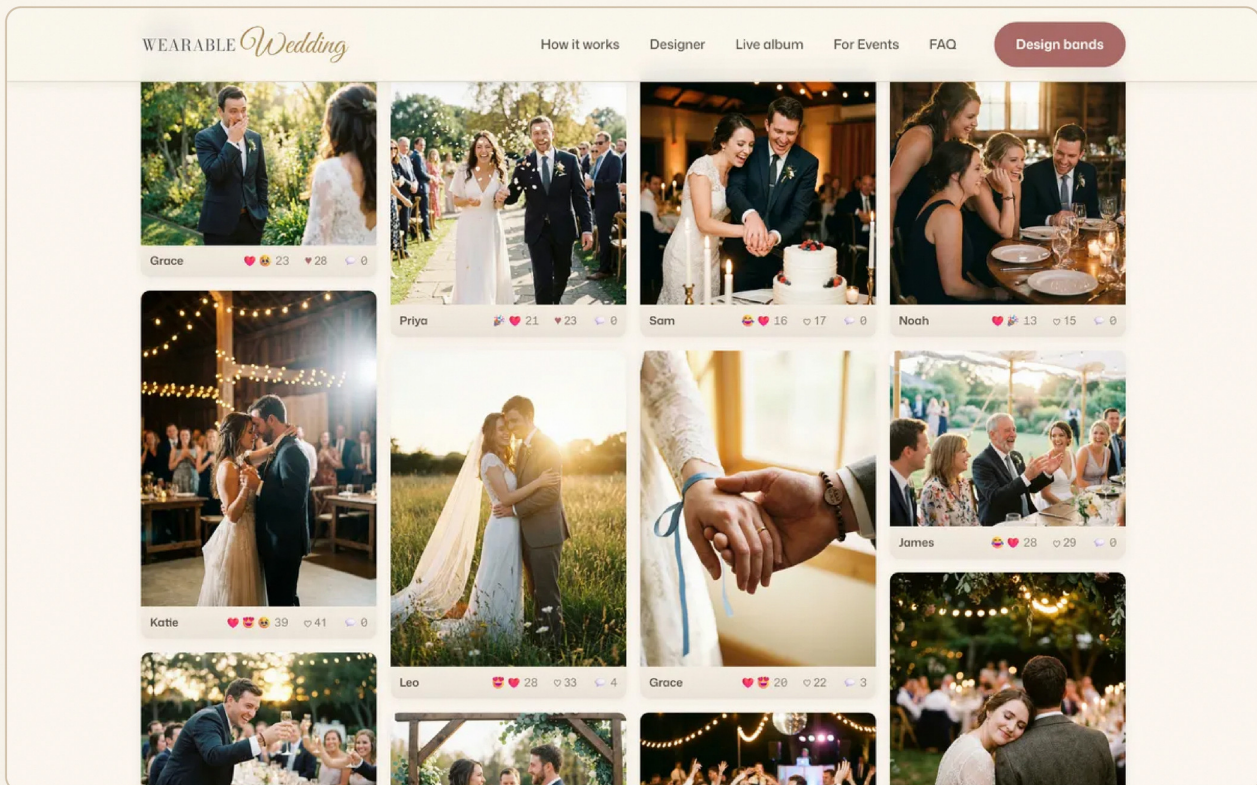

RECEPTION MODE

On the big screen, *as it happens.*

Set it on a TV or projector and every photo hits the wall seconds after a guest taps to share – your guest-book wishes glowing in between. The whole room watches the night unfold, together.

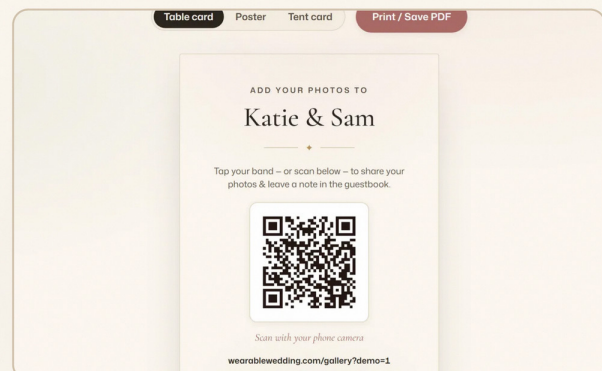

One album the whole wedding fills.

Every candid in one place – react and comment, leave a note in the guest-book, tick off the photo quests together. Yours to keep, comments and all.

Tap the band, or scan the card.

No band on a guest? A printed table card does exactly the same thing – a tap opens it instantly, a scan works just as well. No app, no logins, nobody left out.

WEARABLE *Wedding*

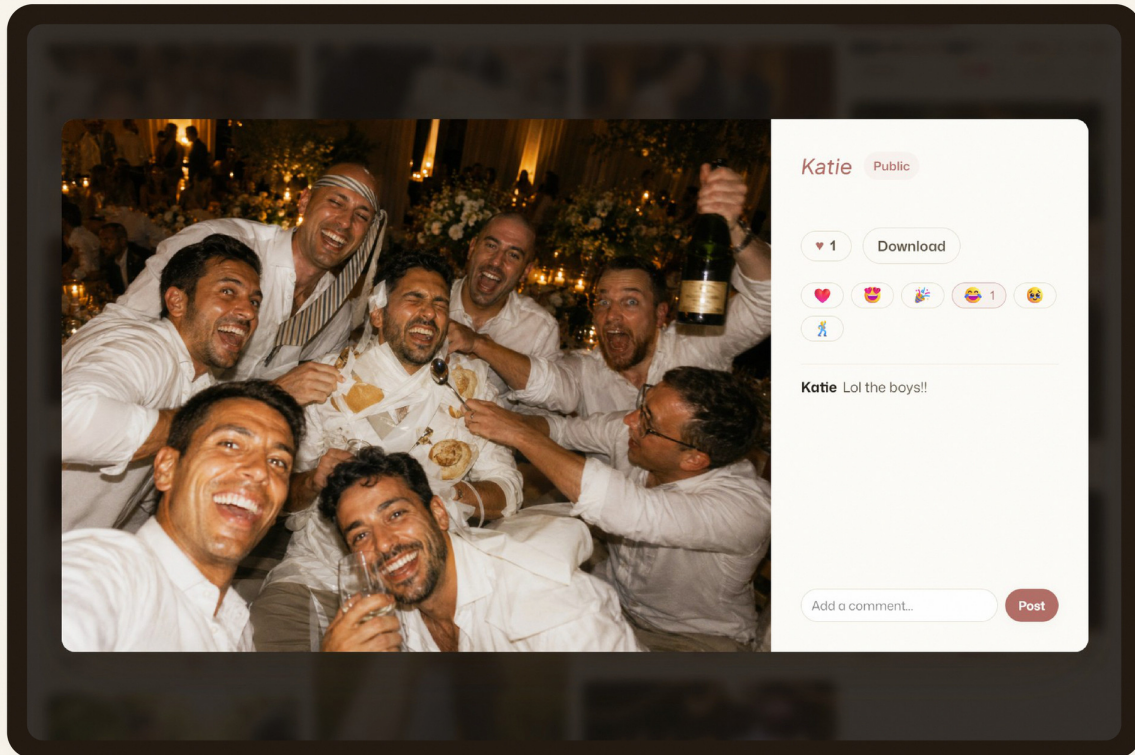

WORN ALL NIGHT, SHARED IN A TAP

The whole table, *in on it.*

The band on her wrist opened her album with a single tap – and the photo she's laughing at is already in yours. Every guest, sharing the night exactly as they live it.

The wedding photos you'd never otherwise see.

The shots only your guests caught

Your photographer captures the posed moments. Your guests catch everything else – the dance floor at midnight, the table you never made it to. Now you actually get those.

Everyone relives it together

Guests like and comment on each other's shots. The whole wedding shares one album instead of a hundred scattered camera rolls.

No hunting through everyone's feed

No messaging twelve friends for the photos they posted. Every candid lands in one place automatically, the night of – not three weeks later.

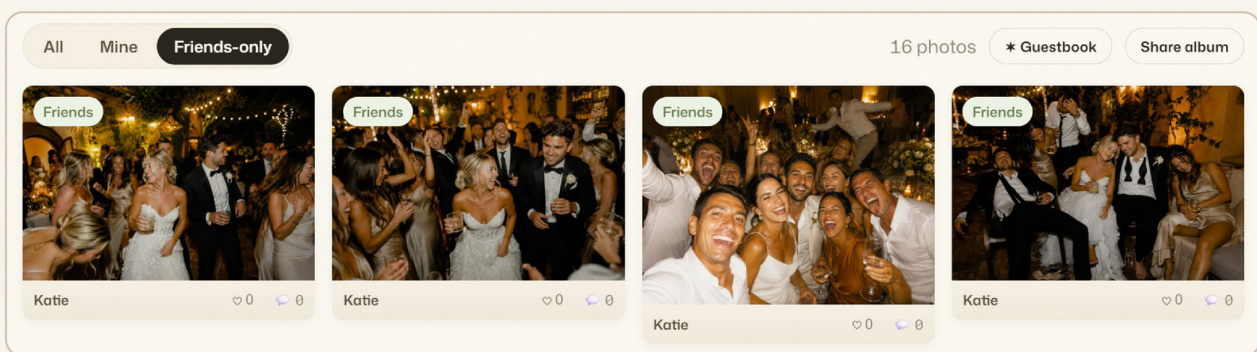

Yours to keep — comments and all

When the music stops, every photo is yours: export the full album, order a printed book, or send any shot straight to Instagram, Facebook or TikTok.

PUBLIC, FRIENDS-ONLY, OR JUST THE TWO OF YOU

The candid shots stay with the people they're meant for.

Some moments are for everyone – the first dance, the toast. Some are for the group chat. And some are a quiet note to the newlyweds. Each guest chooses, photo by photo, and it's enforced behind the scenes.

Public

Everyone at the wedding

The first dance, the cake, the toast – the moments meant for the whole room.

Friends-only

The circle they choose

For the people a guest taps to include – their table, their group, their crew.

Couple only

Just the two of you

A private photo or a quiet message, for the newlyweds' eyes alone.

No accounts, no passwords. A guest's circle is simply the people they tap to include – and private really means private.

THE DIFFERENCE

Why a tap beats a hashtag, a scan, or another app.

THE OLD WAY

A wedding hashtag

Scatters your photos across apps you have to chase down – and half of them are never posted at all.

THE OLD WAY

A QR photo album

A clumsy scan that doesn't know who's sharing, on a paper card nobody keeps once the night is over.

THE OLD WAY

A photo-sharing app

Another download, another login – the exact friction that stops grandparents and busy guests from ever sharing.

WEARABLE *Wedding*

One tap is instant. It greets each guest by name, every photo gathers in one album you own – and the band itself is a keepsake they wear long after the day.

Frequently asked.

Q1 How does it actually work?

Each band has a tiny tap chip and a printed code. A guest taps it to their phone – or scans the code – and their own album opens right in the browser. No app, no sign-up. They drop in their photos and they're instantly in your shared album.

Q2 Do our guests need to download an app?

Never. It all happens in the phone's browser with a single tap – grandparents included. If a phone can't tap, the printed code does exactly the same thing.

Q3 Can guests keep some photos private?

Yes, and they choose photo by photo: public for the whole wedding, friends-only for the people they pick, or just for the two of you. It's enforced on our side, so private really means private.

Q4 What do we get after the wedding?

One shared album with every guest's photos and the comments they left. Browse it, download any shot, export the whole thing, or order a printed wedding book – all in a click. It's yours to keep forever.

Q5 Can guests see the photos during the reception?

Yes. Reception Mode turns any TV or projector into a live photo wall – each new photo appears within seconds of a guest tapping to share, with your guest-book well-wishes shown in between.

Q6 How do we order, and what does it cost?

Bands are made to order from five bands up and designed together with you. Start in the 3D designer or talk to a designer, and we'll quote your wedding – you'll approve a proof before you pay.

HOW TO ORDER

Designed with you, made to order.

Every set is designed together with you – your beads, your wood, your engraving, your names – and made to order, from five bands up. See it before you say "I do," and approve a proof before you pay.

STEP 01

Design

Build your bands in the 3D studio, or talk to a designer about the look you want.

STEP 02

Proof

We send a proof of your beads, wood tag and engraving for your wedding.

STEP 03

Approve

Approve the proof – only then do you pay. Nothing is made until it's right.

STEP 04

We make & ship

Each band is hand-finished, engraved and chipped, then shipped ready to wear.
